## ■ Features of Double Wall Glass ■

This product is made of glass with excellent heat resistance. In addition, The double-layer glass has the function of heat insulation that keeps your drink hot or cold for a long period. And it prevents condensation, so the table is not getting wet when filled with cold drinks. (Condensation may occur depending on the temperature and humidity.)  
The silicone sleeve has a matte texture that fits your hand and is non-slip.  
Made of glass, the drink looks as if it is floating in the air. So it can be used for colorful drinks or desserts.  
Due to the manufacturing method and the characteristics of the material, there are individual differences in shape, size, and weight. In addition, small bubbles may be mixed into the surface or inside the glass.

Add ice gently. If ice is added too forcefully, the glass inside may break. Pour the drink first, Wipe off any external drips from the glass surface before use. The glass may break if it is used with external drops on it.
